The Quantum Parallel Worlds

Part 3 of 3

Part 2 of 3
Part 1 of 3

Dear Readers,

Please be advised that all mathematical equations in this article are patented.

Thank you for your understanding.

Introduction

Can today's mathematics introduce a number where the result of multiplying it by zero is a number other than zero, such as five?

Can anyone explain what infinite mass means, which is the result of some mathematical calculations in physics?

There is no reason to believe that current science is infallible. On the contrary, there is ample evidence that current science has weaknesses and unsolvable paradoxes [1]. This assumption stems from the fact that academic science studies various phenomena incompletely, one-sidedly, and from the wrong perspective. It should be noted that the quantum dimension of these phenomena [2] is not taken into account.

As announced several times, Master Elahi's presentation of the *"Integrated Sciences"* [3] is the beginning of the completion of Quantum Mechanics. This science makes it possible to study phenomena from a perspective that leads to concrete results.

Regarding the possibility that a person can live in several parallel worlds at the same time, as postulated by some theorists of quantum mechanics who view this science from a philosophical and idealistic perspective, this assumption was rejected in two previous articles, and the reasons for this rejection were explained. This article examines the problem from a mathematical point of view.

Explanation and Interpretation of the Equations

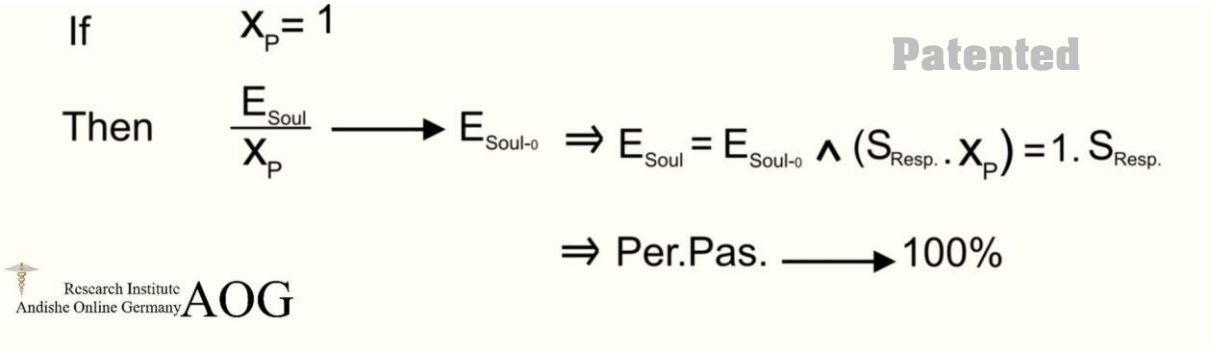
The following equation [4] was presented in the previous article. This article discusses its scientific explanation and interpretation in two different situations.

Figure 1: Main formula

Symbol **descriptions:**

X_P	The number of presences in the parallel worlds.
E_{Soul}	The energy of the soul.
$S_{Resp.}$	The responsibility of the soul in each life or in each parallel presence.
Per.Pos.	The possibility of attaining perfection.
$E_{Soul\text{-}0}$	Energy of the soul in the first presence in only one life.
$\wedge$	It is the symbol for "and". This sign takes into account two variations of two facts (Intersection of sets).
$\longrightarrow$	The arrow in mathematical equations generally represents the tendency toward a particular situation.

The first situation



If $X_P = 1$
Patented
Then $\frac{E_{Soul}}{X_P} \longrightarrow E_{Soul\text{-}0} \Rightarrow E_{Soul} = E_{Soul\text{-}0} \wedge (S_{Resp.} . X_P) = 1 . S_{Resp.}$
$\Rightarrow$ Per.Pas. $\longrightarrow$ 100%

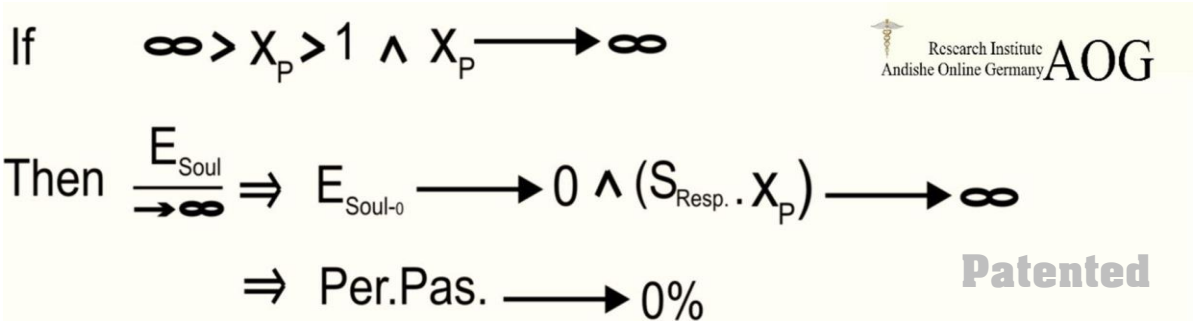
Figure 2: Analysis of the first part of the formula

An analysis of the First State Equation

If the soul is present in only one life at a time, then the soul's energy is allocated to the affairs of that life. Consequently, it should address the tasks pertinent to that life, utilizing the energy available to it. Therefore, the probability of attaining perfection can be considered to be 100%. It is important to note, however, that this percentage represents only a tendency toward the highest possible outcome. As this is a probability calculation, the result could be zero. In general, the outcome is contingent upon numerous other variables that are not addressed here, as the focus is on a different subject.

The second situation



If $\infty > X_P > 1 \wedge X_P \longrightarrow \infty$
Research Institute Andishe Online Germany AOG
Then $\frac{E_{Soul}}{\rightarrow \infty} \Rightarrow E_{Soul\text{-}0} \longrightarrow 0 \wedge (S_{Resp.} . X_P) \longrightarrow \infty$
$\Rightarrow$ Per.Pas. $\longrightarrow$ 0%
Patented

Figure 3: Second part of the formula

An analysis of the second state equation

It is first and foremost important to recognize that there are numerous additional states between the initial and this one, which will not be discussed in order to conserve time.

If, as postulated by quantum theorists, the manifestation of the soul occurs in multiple lives, in two or more parallel lives, then, given the constant amount of energy available to the soul, the energy of the soul must be divided by the number of parallel lives. This is an implausible scenario because it assumes that the same soul is responsible for each additional parallel life. It can thus be concluded that the soul always requires more energy, rather than less. It is evident that the reduction in energy and the increase in accountability render the prospect of attaining soul perfection highly implausible.

The Perspective of the Research Institute AOG

According to Master Elahi's teachings, each soul, which is a specific magnetic field, appears as a true self, consisting of a human soul and a celestial soul, on different planets in different galaxies [5] in order to gain the necessary experience for final maturity and to reach the degree of perfection intended for human beings. Therefore, as already mentioned, there is no logical reason for a soul to be present in two or more earthly lives at the same time. Of course, in rare and special cases, for special reasons, it is possible to be present in two lives at the same time, but this happens very rarely. As has already been shown with the help of mathematics, such an event is not only unfavorable for the soul, but also reduces the possibility of achieving perfection.

End of part 3 (last part)
